Professional Summary

Third-year Information Technology undergraduate with hands-on experience building full-stack applications using TypeScript, JavaScript, React, Next.js, Node.js, Express.js, and PostgreSQL. Experienced in designing RESTful APIs, database-driven systems, authentication, payment integrations, and scalable backend architectures. Strong foundation in data structures, algorithms, and software engineering principles, with a focus on building production-oriented web applications. Seeking software development internship opportunities.

Education

2024 – 2028

**Bhagwan Parshuram Institute of Technology (BPIT),
GGSIPU, Delhi** Bachelor of Technology in Information Technology

Technical Skills

- **Programming Languages:** JavaScript, TypeScript, Python
- **Frontend Technologies:** React.js, Next.js, HTML5, CSS3, TailwindCSS, Framer Motion
- **Backend Technologies:** Node.js, Express.js
- **Databases:** MongoDB, MySQL, PostgreSQL, Neon
- **Tools & Platforms:** Git, GitHub, Docker, Vercel, Drizzle ORM, RESTful APIs
- **Core Concepts:** Data Structures and Algorithms, Authentication, API Design, System Design, Payment Gateway Integration

Projects

MerchantGate – Agent Commerce Infrastructure [Live Demo](#) | [GitHub](#)

- Developed a full-stack platform enabling AI buyers to discover, negotiate, and purchase products through agent-facing APIs, built with Next.js 16, TypeScript, and PostgreSQL (Neon).
- Architected agent-facing APIs and implemented a `.well-known/agent-commerce.json` discovery specification for agent verification, product discovery, and checkout.
- Implemented a robust policy engine with transaction limits, price slippage tolerance, and rolling 30-day budgets to ensure AI agents operate safely within merchant-defined boundaries.
- Integrated Razorpay Payment Gateway for test-mode payment processing and built an append-only audit trail with SHA-256 hash chaining for complete transaction traceability.
- Created a comprehensive merchant dashboard with product management, an AI negotiation UI, order management, an audit log, and a global kill switch to disable AI sales.
- Implemented request validation, authorization checks, and transactional database operations across agent-facing APIs to ensure reliable and secure order processing.

Formium – Form Management Web Application [Live Demo](#) | [GitHub](#)

- Engineered a full-stack form management platform using TypeScript, React, Node.js, Express.js, and PostgreSQL.
- Implemented secure authentication and role-based access control (RBAC) to protect user and form data.
- Developed a dynamic form builder with real-time preview, form validation, and response collection.
- Integrated third-party APIs to automate response exports and notifications through Google Sheets and Slack.
- Designed a modular backend with separation of API, service, and data-access layers to improve code organization and maintainability.
